Patients and clinicians lead the way for long-COVID biomarker development

Are you 18 years or older?

Have you been diagnosed with long-COVID by a healthcare provider, or do you believe you have long-COVID? We will provide an online screening questionnaire (SBQ™-LC) to assess your condition.

OR

Are you a healthcare professional with experience in diagnosing long-COVID?

We want to hear from you both!

- This is a 30-minute study.
- You will be interviewed either via Zoom or in person, depending on your preference, and asked questions about your experience with long-COVID.
- Video will be used to confirm your identity.
- You will receive compensation for your participation.

We aim to understand long-COVID diagnosis from your perspective. We are interested in your experience and suggestions for developing biomarkers, which can be measured through a simple blood test, to improve the diagnosis of long-COVID
